
ALBILEX[®]-OXI-OFF

ALBILEX[®]-OXI-OFF is a deoxidation chemical based on an aqueous solution which is used for the removal of sulfidic and oxidic layers from silver, gold and other metals. ALBILEX[®]-OXI-OFF is used for decorative and technical applications.

Advantages

- Ready for use solution – easy and safe to handle
- Fast and efficient removal of oxide layers
- Gentle abrasion of oxide layer – preserves base metal
- Operation at room temperature (25-30°C)
- Regeneration of original brightness of the metallic surfaces
- Multiple reusability

Application

ALBILEX[®]-OXI-OFF is a ready for use solution which is used at a bath temperature of 25-30 °C. The degreased, to be cleaned parts can either be dipped into a glass or plastic tank or treated by a paintbrush. Bath agitation is recommended when using immersion process. The operational time – depending on the oxide layer thickness – varies from 1-3 min. Afterwards careful rinsing and drying of the parts. Wear gloves.

Storage

Store in closed, original package at cool conditions.
Further information can be obtained from the material safety data sheet.

Disposal

According to local regulations the electrolytic degreasing solution has to be given to the chemical disposal and afterwards to the sewage treatment plant. Further information can be obtained from the material safety data sheet.

Delivery Form

ALBILEX[®]-OXI-OFF is delivered in 1-liter-bottles (Art.Nr.: 6010001).
