
Sodium Hydroxide – 32%

Sodium hydroxide is a chemical agent for the increase of pH-values. It is used in the electrophoretic coating process Antitarnish-A-100 PRO-KIT to adjust the pH-value to 3.7 (range: 3.4 – 4.1).

Application

Use only diluted sodium hydroxide when applying the electrophoretic coating process. Further information can be obtained at product sheet Antitarnish-A-100 PRO-KIT.

Delivery Form & Storage

Sodium hydroxide 32% is delivered in 1 liter (item-no.: 6004001) package size.

Store well closed.

For further information please read material safety data sheet.
